DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Hjaltason et al. (6,789,502). Hjaltason et al. disclose an aquatic food composition comprising at least 0.5 wt% sodium chloride (col. 6, lines 6-14). Although Hjaltason does not specifically disclose that the weight percentage of NaCl in the composition is between 1-10%, it would have been obvious to one having ordinary skill in the art at the time the invention was made in order to provide the optimal aquaculture environment for a particular species. Since it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233. The normal desire of scientists or artisans to improve upon what is already generally known provides the motivation to determine where in a disclosed set of percentage ranges is the optimum combination of percentages. See In re Boesch, 617 F.2d 272, 276, 205 USPQ 215, 219 (CCPA 1980) (“[D]iscovery of an optimum value of a result effective variable in a known process is ordinarily within the skill of the art.” See, e.g., In re Baird, 16 F.3d 380, 29 USPQ2d 1550 (Fed. Cir. 1994); In re Jones, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992). *In*

re Peterson Appeal No. 02-1189 (Fed. Cir. January 8, 2003). Where routine testing and general experimental conditions are present, discovering the optimum or workable ranges until the desired effect is achieved involves only routine skill in the art.

3. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over Seawright (6,065,245). Seawright discloses an aquaculture diet composition comprising sodium chloride (Tables 16.3, 16.34, 17.1), however, the claimed weight percentages aren't specifically disclosed. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide the claimed weight percentage of NaCl in the Seawright composition in order to provide the optimal concentration of nutrient requirements of the aquaculture; additionally, it has been held that where the general conditions of a claim are disclosed in the prior art, discovering the optimum ranges involves only routine skill in the art. *In re Aller*, 105 USPQ 233.

Allowable Subject Matter

4. Claim 2 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
